

February 28, 2020

I would first like to express my thanks for the grant funds that were made available by this organization. Through this grant I was able to obtain robotics competition kits to initiate robotics teams in our school. I was able to order three robotics competition kits and form teams for these kits. At the current time we are working on developing our skills and understanding the coding that is required for competitions. We hope to compete in our first major competition next school year. Since receiving this grant, another teacher at another school in our district also acquired the robotics kits so that we can compete together and collaborate between schools. My students have thoroughly enjoyed getting to work on robotics and learn new skills including: coding, building, engineering design, collaboration and teamwork.

Thank you again for this opportunity. Being supported by community members makes a world of difference in our classrooms.

Sincerely,

Amber Bryan
