

The following is a summary of the progress that has been made in implementing the data recording tools that were purchased for the greenhouse with the funds provided by the Vision Grant.

The data recording tools have been purchased and received. After completing the spring planting the students in my Nursery, Greenhouse, and Garden Center Technology class, will work on installing the data recording sensors in the greenhouse. These tools will allow us to monitor greenhouse conditions such as humidity, temperature and soil moisture. The students are currently working on where to install the sensors so that they will collect the most accurate data.

These tools will greatly allow us to monitor growing conditions and allow for students to trouble shoot problems as they arise in the greenhouse.

Thank you for this opportunity to incorporate this technology into our program and for your support of our school and students.
