

The funds I was awarded were used to purchase graphing calculators for my students. They use the calculators daily in class, and this was the first year they learned to use them to graph equations. Several students have gone above and beyond what I imagined and learned to do all types of equations on their calculators. These students were challenged to create a slide show with images and instructions for other students to use. The calculators have been a great addition to my room, and will give the students the advantage of being familiar with the technology for Algebra 1 next school year.
