

I received the money to purchase the Multiplication Wrap Up Kit. At the time of the request, I was teaching 4th grade, but was then moved to 2nd grade for this school year. I used the Wrap Ups to provide some of my higher level math students a challenge and expose them to multiplication facts that they will be learning in the 3rd grade. I feel that the differentiated instruction provided students with key concepts that they need to be successful at the next grade level. I was able to use the Wrap Ups 0-2 for all students and my higher level students were able to practice with levels up to 5. I feel that this was a great manipulative for my students to experiment with and practice multiplication facts.
