## Station Rotation

My Learning Strategies class has soared this school year with the materials brought with the grant we received. I was able to buy material for reading, math and writing stations in my class. The students have materials to help them with reading comprehension, math. At the beginning of the school year my student scored very low in math and reading on the I-Ready diagnostic test. We recently took the last diagnostic test. Ten out of thirteen students showed significant growth in math and reading. Some of the students grew between 2 and 3 grade levels. The students also use the Ipad that was bought with the grant funds. The IPAD is used in the station rotation to work on math or reading my path in I-Ready. The students love using the Ipad, and also if the student does not have their chromebook they can use the Ipad as well. The Ipad was used to help the students get more practice with math problems that were difficult for them. And also, the students were able to do reading comprehension on the Ipad as well. Working in the station rotation allowed the students to work in groups and independently. The students were able to collaborate with each other, and the students also worked individually with their students. I will continue to use station rotation in my class, because it allowed me to see my students successfully grow in math and reading.
