

My project, “ABC, 123...Amp It Up For You And Me!,” provided literacy and STEM stations that integrated all curriculum areas. Students explored and practiced skills and used problem solving to complete challenges and activities. The literacy stations allowed the children to be emersed in all things literacy such as books, writing materials, magnetic letters, games and much more. With the STEM stations, students brainstormed and worked together to plan, create, and test solutions. Through read alouds and learning logs, students reflected on their learning and understanding. All kindergarteners participated in hands-on experiences as they researched, observed, planned, classified, measured, communicated, inferred and predicted throughout the school year. As a result, this project naturally inspired students to think divergently, inventively, and imaginatively. Thanks so much for providing the opportunity for me to “amp up” learning in my classroom!
