Edgefield School Foundation

Dear Ms. Lori Robinson,

I am truly grateful to have received a Teacher's Vision Grant to support the purchase of a STEM Water Exploration Kit for our Pre-K learners. This resource has already proven to be highly effective in helping students explore foundational science concepts such as floating, sinking, measuring, motion, and cause -and -effect through meaningful, hands-on experiences. The kit encourages curiosity, early problem-solving, and language development as students ask questions, make predictions, and work together during exploration.

Mostly important the students enjoy using the kit. Their excitement and engagement are evident as they experiment, discover, and learn through play. It has quickly become a favorite part of our classroom learning environment and is helping build confidence and interest in STEM at an early age. I sincerely appreciate this investment in creating joyful, high-quality learning opportunities for our young learners.

Best Regards,

Keidra Lott
