

Enhancing Creativity and Engineering with Chompsaws

Thank you so much for providing my class with the funds to purchase Chompsaws. They have exceeded my expectations and I am grateful everyday for them. My classroom received four Chompsaws through this grant award, which has proven to be a wonderful addition to the learning environment.

Since implementation, the Chompsaws have generated numerous positive outcomes for students. Most notably, student engagement has increased significantly, with learners showing greater motivation and investment in their work. The ideas for paper mache projects, sculpture, relief murals, and pinatas have gotten more complex in comparison to recent years due to the Chompsaws. The tools have also enhanced creativity, allowing students to explore design solutions and problem-solving approaches. Additionally, access to multiple Chompsaws has improved overall craftsmanship as students develop stronger technical skills and greater attention to detail in their projects. Finally, having four units available has dramatically improved accessibility, enabling more students to participate simultaneously, reducing wait times, and providing a safer classroom. Students who may have trouble using scissors or x-acto knives use the Chompsaws with ease. This investment has transformed how I approach 3D projects and supports student growth and creativity. I would love to apply for more Chompsaws in the future, if possible. Thank you, again!
